## Instructions for use for Meta trader 4.

### Specifications and minimum requirements.

- **Leverage** : from 1:30. It is recommended to use for best results with minimal risks 1:100 - 1:200. To achieve maximum results, it is recommended to use 1:500 with a load on each position of no more than 0.5% of the deposit. At this parameter "Volume perent lot" = 0.5

|                        |   |
|------------------------|---|
| ab Symbols List        | EURUSD,GBPUSD,USDJPY,GBPJPY,USDCAD,EURAUD,... |
| 1/2 Volume Fixed lot   | 0.1   |
| 1/2 Volume percent lot | 0.5 ←   |

**Attention!** Using a leverage of 1:500 and above increases the load on the deposit and increases the risk of losing the deposit when using the withdrawal at no loss / averaging.

- **Money Management** : automatic control of the volume of a trading position for entering the market relative to the size of the trading account balance. It is possible to switch to a fixed volume.
- **Loss limit** : entry into the market with positions with StopLoss .
- **Profit fixation** : according to the take profit set by the utility.
- **Used time frame:** any. The selected time frame does not affect the results of received entry signals.
- **Recommended minimum deposit:** trade with StopLoss of at least \$100 per currency pair for 0.01 lot.
- **Installation:** file in . ex 5 is installed in the trading terminal folder \MQL4\Experts. forexrobot file . dll is installed to the \MQL4\Libraries folder. The folder is accessed through the navigation menu of the Meta trading terminal Trader 4. How to install the adviser in the trading terminal, read on our website in the " [FAQ](#) " section.

2

- **Trading settings:** supplied for the currency pairs indicated at the beginning of this manual and on the EA [description page](#) on our website.
- **Transaction types:** positions in the market SELL , BUY . Pending orders SellStop , SellLimit . The type of transaction is chosen by the trader when deciding to enter the market on the panel by pressing the corresponding button of the selected instrument.

## Description of the trading strategy of the ScoutFX trading panel

**Trading strategy:** Entering the market based on the analysis of COT (Commitments of Traders) reports provided by the CFTC (US. Commodity Futures Trading Commission) - EURUSD, GBPUSD, USDJPY, GBPJPY, USDCAD, EURAUD, EURJPY, AUDCAD, AUDJPY, AUDUSD, CADJPY , EURCAD, EURCHF, EURGBP, GBPCAD, USDCHF, CHFJPY, AUDCHF, CADCHF. Entering the market 2-3 times a week for several pairs at once, for which we have the conditions for opening positions specified in the settings. The target profit for each instrument in the market is 0.3% intraday or the achievement of the set take profit for each instrument individually.

## Parameters and trading settings

The utility uses **8(!)** parameters for adjusting trading settings. Next, we will talk about each setting with a detailed description of the results obtained.

The utility settings window can be opened in the Meta Trader 4 terminal in two ways.

1. Double-click with the left mouse button on the utility symbol in the upper right corner of the chart where the utility is installed.

2. Calling the utility settings menu via the F7 key.

By opening the utility settings window, you can manually change any parameter available in the settings, or load ready-made trading settings supplied in the bundle you purchased via the "Load" button.

4

Given the flexibility of the trading settings of the utility, you can also change the trading settings yourself, creating your own individual trading algorithm.

1 Beginners are advised to work with the adviser for some time on a demo account.

## Trading settings, detailed description.

**language** // selection of the trading panel interface language. There is a choice of English or Russian language.

**Target for enter** // percentage target. The % dominance of the choice of market participants is set. Example: parameter = 90. If for any of the instruments the volume of open positions is equal to or greater than 90%, the panel will inform you about this with a pop-up window with a recommendation to make a decision to make a deal, a voice message and a symbol [ X ] opposite the instrument for which the signal was generated .

**update period , min** // sets the period in minutes after which to repeat the request for CoT data .

**symbol List** // list of instruments for which the request is being made. The name of the instruments in the settings must match the name/designation of the instruments in the terminal of your broker.

**Volume Fixed lot** // fixed position/order volume in lots.

**Volume percent lot** // automatic calculation of the volume of the opened position/order. The parameter is set as a percentage of the margin of the account balance. The value is specified in both integer and decimal values.

5

**take profit** // the size of the position's physical take profit in points. If value = 0 (zero), take profit will be set at the level of the largest accumulation of orders in the opposite direction.

**Take Profit Pending** // Size take profit in paragraphs for deferred SellStop and BuyStop orders. If value = 0 (zero), the order will be placed without take profit.

**Stop Loss** // Size of the loss limit in points. If value = 0 (zero), position/order will be opened without Stop level Loss .

## Non-trading settings

**Magic number** // Identifier of orders opened by the trading panel. To customize orders opened by the ScoutFX trading panel Panel , the magic number must be unique from orders/deals opened by other advisors or manually by a trader.

**Font name** // The name of the font used in the ScoutFX dashboard panel . All fonts from the Windows platform are available.

**Font size** // The size of the font used in the info panel. Available in three sizes Small , Middle , Big .

**background color** // ScoutFX dashboard background color

**Text color** // Font color for tool and table headers.

**short color** // Color of the "sell" status of the bar, buttons for opening sell deals, values of sell volumes.

**Long color** // Color of the "buy" status of the bar, buttons for opening buy deals, values of buy volumes.

| Symbol | Shorts vs Longs | Alert | Volume Short - Long | Average Short Price | Distance From Price | Average Long Price | Distance From Price | Text color                        |

6

**use sound // true** - use a sound notification about the presence of a decision signal. **False** - the sound notification is disabled.

**sound target // name** of the sound file used for the sound notification.

### Market entry recommendations based on ScoutFX signals panel.

The Trader's Panel is a semi-automated trading system that gives the trader recommendations for entering the market.

The screenshot shows the ScoutFX signals panel integrated into a trading platform. The panel displays a table of currency pairs with columns for 'Shorts vs Longs', 'Alert', 'Volume Short - Long', 'Average Short Price', 'Distance From Price', 'Average Long Price', and 'Distance From Price'. A pop-up window titled 'Alert' shows a recommendation: 'We recommend to take action SELL in regard to USDCHF'. The interface also includes a chart, account information, and various trading tools.

When an overwhelming majority is reached in one of the directions, according to the parameters set in the settings, the panel signals the trader with a voice message and a text message in a pop-up window. In a pop-up window, the trader will receive a message about the decision to open a buy or sell position for one or more currency pairs. The number of recommended currency pairs depends on market sentiment and the volume of open positions of market participants for each currency pair individually.

You can switch between tools by clicking on the name of the tool in the info panel. ScoutFX Panel clearly shows on the chart the largest accumulation of volumes in the market. The green line is the price

of the accumulation of buy positions. The red line is the price of the largest accumulation of sell positions.

### How to enter the market?

Example: The market price is higher green line of accumulation of volumes, a signal to sell has been received. Open a deal to **sell** .

Example: The market price is below the red line of accumulation of volumes, a signal to buy has been received. Open a deal to **buy** .

7

## Trading settings and updates.

The advisor comes with trading settings for the currency pairs EURUSD,GBPUSD,USDJPY,GBPJPY,USDCAD,EURAUD,EURJPY,AUDCAD,AUDJPY,AUDUSD ,CADJPY,EURCAD,EURGBP,GBPCHF,USDCHF,CHFJPY,AUDCHF,GBPCAD,NZDCAD,AUDNZD, XAUUSD.
